Leak!

Technical Provisions

Our shows are complete and exacting pieces of theatre designed specifically for performance in outdoor spaces. One of the central ideas of this show is that there will be two separate versions one for daylight and one for darkness. The night time performance includes video projection and the site for the show must take this into account.

Daylight Shows

Flat performance area at least 9 meters by 9 meters.

Access to the performance area from 3 hours before the first performance and for one hour after the last performance. The installation will have a low key presence throughout the day. With two performances highlights.

Supply of clean water from either standpipe or service tap. Must be within 50 meters of the performance site and be accessible at least 90 minutes before each performance. A hose will be run from this tap to the performance site. It will not be connected during the show. The show will require 200 litres per performance.

Eight sections of Heras fencing set as supplied plan.

Secure dressing room with minimum of mirror and sink or bowl with water supply preferably with shower.

The show uses

Two separate 16 amp feeds for 3 pumps one rated at 0.5kw & two at 1.5 Kw, PA System 300 watts per side, four 500 watt halogen lights. One sampler and hard drive, one smoke machine, one laptop computer, one data projector.

Night Shows

Notes

All the performances must be in the same location on any day.
